

Python Loops Concepts

for loop: Iterate over an iterable.

```
for item in items:  
    print(item)
```

while loop: Repeat while condition is True.

```
count=1  
while count<=5:  
    print(count)  
    count+=1
```

range(): range(5), range(1,6), range(1,10,2)

break: Exit loop immediately.

continue: Skip current iteration.

pass: Placeholder statement.

else with loops: Executes only if loop ends without break.

Nested loops: Loop inside another loop.

enumerate(): Iterate with index.

zip(): Iterate over multiple iterables.

List comprehension: [x*x for x in range(5)]
